

Hill's Cat Food

Adult Hairball Control

Hill's® Science Diet® Adult Hairball Control cat food provides precisely balanced nutrition to help avoid the formation of hairballs. It has an ideal amino-acid balance to help

reduce shedding and a unique fiber technology to reduce hairballs by moving hair through your cat's system. Its high quality ingredients make it ideal for every day feeding.

Adult Optimal Care™ Liver & Chicken Entrée Mincéd

Science Diet® Adult Optimal Care™ Liver & Chicken Entrée Mincéd cat food

brings together two flavors most cats find too tempting to resist in a soft, smooth texture. It has precisely balanced nutrition to maintain lean muscle and vital organ health.

Adult Hairball Control Light

Hill's® Science Diet® Adult Hairball Control Light cat food provides precisely balanced nutrition to help avoid the formation of hairballs and control weight. It

contains L-Carnitine to help turn fat into energy and fewer calories than the Hill's® Science Diet® Adult Hairball Control formula. It also has clinically proven antioxidants to support a healthy immune system for your cat.

Indoor Cat Mature Adult 7+

Science Diet® Indoor Cat Mature Adult 7+ cat food is formulated specifically to meet the special requirements of

mature adult cats. It includes special, natural vegetable fibers that help bring hairball problems under control. Its innovative fiber technology helps control and avoid the formation of hairballs by moving hair through your cat's system. Science Diet® Indoor Cat Mature Adult 7+ is specially formulated as a complete and balanced daily nutrition for older cats, providing essential nutrients to nourish your cat's skin and coat.

Adult Optimal Care™ Gourmet Beef Entrée Mincéd

Cats will feast on Science Diet® Adult Optimal Care™ Gourmet Beef Entrée Mincéd cat food

with its soft, smooth texture. It has precisely balanced nutrition to maintain lean muscle and vital organ health.

Kitten Healthy Development Original

Rich in fish oil and nourishing fatty acids Hill's® Science Diet® Kitten Healthy Development Original cat food gives your kitten precisely balanced nutrition to

build immunity and digestive health. It is enriched with DHA from high quality fish oil and made with high quality ingredients that provide an ideal combination of nutrients, clinically proven antioxidants and vital fatty acids to give your kitten the best start in life.

Kitten Healthy Development Turkey & Giblets Entrée Minced

Kittens will love the taste of Science Diet® Kitten Healthy Development Turkey & Giblets Entrée Minced cat food with its smooth, soft texture. Science Diet® Kitten has precisely balanced nutrition to build immunity and digestive health. This food is also ideal for pregnant or nursing cats.

Light Adult Science Diet® Adult Light Liver & Chicken Entrée Minced

cat food indulges cats with the delicious taste of liver & chicken while helping them achieve an ideal weight. It provides all of the essential nutrients cats need for optimum health with a low calorie, low fat formula to help with weight control. High fiber helps control hunger between meals.

Light Adult Hill's® Science Diet® Adult Light

cat food provides precisely balanced nutrition to help achieve ideal weight. It has fewer calories than the Hill's® Science Diet® Adult Optimal Care™ Original formula and contains L-carnitine to help your cat turn fat into energy. It also has a high fiber content to keep her satisfied between meals. All this, and our best taste ever!

Nature's Best™ Chicken & Brown Rice Dinner Kitten Science Diet® Nature's Best®

is the first and only natural pet food clinically proven to provide complete, balanced nutrition. REAL chicken. REAL fruits, vegetables and whole grains. NO ARTIFICIAL preservatives. NO ARTIFICIAL colors. NO fillers. Not just HEALTHFUL but TASTES GREAT, too.

c/d® Multicare Feline

For the Nutritional Management of Cats with Feline Lower Urinary Tract Disease (FLUTD) caused by struvite uroliths or urethral plugs, calcium oxalate uroliths, or feline idiopathic cystitis (FIC).

FLUTD is often associated with inflammation of the urinary bladder and urethra. It is characterized by clinical signs such as urinating outside the litter box, frequent attempts to urinate, and/or straining to urinate. Prescription Diet® c/d® Multicare Feline is formulated to provide nutritional management of cats with the 3 most common causes of FLUTD including FIC, struvite uroliths or urethral plugs, and calcium oxalate uroliths.

Prescription Diet® c/d® Multicare Feline pet food contains controlled levels of magnesium, calcium, phosphorus, and oxalate to reduce building blocks of crystals and uroliths, as well as enhanced vitamin B6 to help decrease oxalate formation and excretion in the urine. c/d® Multicare Feline also generates an environment that is unfavorable for the development of uroliths due to the addition of antioxidants, Vitamin E and beta-carotene. c/d® Multicare Feline is formulated to avoid excess sodium and has high levels of omega-3 fatty acids from fish oil that help break the inflammatory cycle associated with the most common causes of FLUTD.

g/d® Feline For the Nutritional Management of Older Cats

Prescription Diet® g/d® Feline cat food is formulated to be helpful in older cats and is a

nutritional aid in managing heart disease and heart failure. The reduced sodium level helps to control the clinical signs associated with fluid retention, and added taurine helps maintain normal heart function. In addition, the reduced phosphorus level helps slow the progression of early kidney disease, and the reduced sodium helps minimize high blood pressure. The nutritional formulation of **Prescription Diet® g/d®** may also be useful for pets with a variety of conditions.

Hypoallergenic Treats

A tasty treat specially formulated to eliminate the potential for an allergic reaction in pets with suspected food allergies or for pets with inflammatory skin conditions.

i/d® Feline For the Nutritional Management of Cats with Gastrointestinal Disorders

Gastrointestinal (GI) disorders affect both the stomach and

intestines, creating painful symptoms that can have an impact on your cat's overall health. The most common symptoms associated with GI disorders are vomiting, regurgitation, flatulence, weakness, diarrhea or constipation. **Prescription Diet® i/d® Feline** cat food is a highly digestible formula created specifically to help manage cats with GI disorders. There are several types of GI disorders that affect cats, including colitis, constipation/diarrhea, gastroenteritis and pancreatitis. The nutritional formulation of **Prescription Diet® i/d®** may also be useful for pets with a variety of conditions.

k/d® Feline
For the Nutritional Management of Cats with Kidney Disease

There are many causes for kidney disease resulting in a variety of

uncomfortable and life threatening symptoms for your cat. Kidney disease can be either sudden (acute) or occur gradually (chronic). **Prescription Diet® k/d® Feline** cat food has been uniquely formulated to help manage cats with kidney disease. Kidney disease can result from other illness or changes in your cat's health, breed/hereditary tendencies and even nutritional factors. The signs of kidney disease remain difficult to detect until more than two-thirds of kidney function are lost. The nutritional formulation of **Prescription Diet® k/d® Feline** may also be useful for pets with a variety of conditions.

m/d® Feline
For the Nutritional Management of Cats with Obesity or Diabetes

For veterinarians with overweight feline patients, Hill's now provides two nutritional therapy

options:

Prescription Diet® r/d® Feline cat food is a low-calorie, high-fiber, nutritional therapy with the highest levels of L-Carnitine to effectively reduce weight and increase muscle mass while keeping cats feeling full. **Prescription Diet® m/d® Feline** cat food is an alternative nutritional therapy for weight loss in cats. **Prescription Diet® m/d® Feline** is a low-carbohydrate, high-protein food with the highest levels of L-Carnitine that alters a cats unique metabolism to reduce body fat and increase muscle mass. Added fiber increases satiety. **Prescription Diet® m/d® Feline** is also useful as a nutritional aid for cats with diabetes mellitus. The nutritional formulation of **Prescription Diet® m/d®** may also be useful for pets with a variety of conditions.

r/d® Feline

For the Nutritional Management of Overweight Cats
A weight problem can cause your cat discomfort, reduce energy levels and even decrease his or her life

expectancy. This problem is typically caused by too many calories, too much fat and not enough exercise. Prescription Diet® r/d® Feline cat food was created especially for the management of cats that are overweight or obese which can lead to heart disease, arthritis, and diabetes. Prescription Diet® r/d® is a low calorie, high fiber nutritional therapy with the highest levels of L-carnitine to effectively reduce weight and increase lean muscle mass while helping cats feel full. The nutritional formulation of Prescription Diet® r/d® may also be useful for pets with a variety of conditions.

painful symptoms, including obstruction. Struvite and oxalate are the two most common crystals that form in a cat's urinary tract. Prescription Diet® s/d® cat food is formulated by veterinarians to help dissolve struvite crystals and stones in your cat. Prescription Diet® s/d® has low levels of magnesium and produces an acid urine pH to aid in the management of struvite crystals and stones. The nutritional formulation of Prescription Diet® s/d® may also be useful for pets with a variety of conditions.

s/d® Feline For the Nutritional Management of Cats with Struvite Related Feline Lower Urinary Tract Disease (FLUTD)

FLUTD is a problem often involving the formation of mineral-based crystals and stones in your cat's urinary tract that can cause a variety of painful symptoms, including obstruction. Struvite and oxalate are the two most common crystals that form in a cat's urinary tract. Prescription Diet® s/d® cat food is formulated by veterinarians to help dissolve struvite crystals and stones in your cat. t/d® Feline For the Nutritional Management of Cats with Dental Disease

Brought on by a buildup of plaque and tartar, dental disease can cause painful and even

serious problems. Prescription Diet® t/d® Feline cat food is formulated specifically for the nutritional management of cats with dental disease caused by plaque and tartar buildup. If left unchecked, this buildup can lead to gingivitis, a dental condition that can weaken the gums and tissues that support the teeth. The special fiber matrix of t/d® Feline scrubs the exposed tooth surface like an edible toothbrush, reducing bacteria-laden plaque. The nutritional formulation of Prescription Diet® t/d® may also be useful for pets with a variety of conditions.

z/d® Low Allergen Feline For the Nutritional Management of Cats with Food Allergy and Intolerance

Food allergy and intolerance, also

called adverse reactions to food, can cause serious skin and stomach problems in your cat. This condition is usually an abnormal response to a specific protein in food. Only **Prescription Diet® z/d®** pet food is formulated with Hill's Hydrolyzed Protein System™, a process that eliminates animal intact proteins and significantly reduces the possibility of an adverse reaction to food. For cats, most allergic reactions occur as a result of beef, dairy products and fish. **z/d® Low Allergen Feline** cat food contains none of these allergens. The nutritional formulation of **Prescription Diet® z/d® Low Allergen** may also be useful for pets with a variety of conditions.
