

Hill's Dog Food

a/d® Canine/Feline

For the Nutritional Management of Pets Recovering from Serious Illness, Accidents and Surgery

Both dogs and cats can undergo significant changes when faced with a serious illness, injury or surgery. They may have trouble

maintaining natural defences and sparing lean body mass (in other words, they may be losing body weight from muscle or organ tissue), which can affect recovery. Prescription Diet® a/d® Canine/Feline pet food has been specifically formulated by veterinarians to be fed to dogs or cats in these situations. These conditions can be helped by adding the key nutrients and digestible energy found in Prescription Diet® a/d®. The nutritional formulation of Prescription Diet® a/d® may also be useful for pets with a variety of conditions.

c/d® Canine

For the Nutritional Management of Dogs with Urinary Tract Disease Associated with Struvite

Urinary tract disease is associated with the build-up of crystals and stones in the urinary tract that can cause

painful and bloody urination and potential blockage in your dog. One type of crystal that forms in a dog's urinary tract is called struvite. Prescription Diet® c/d® dog food is formulated specifically to provide nutritional management of dogs with struvite-related urinary tract disease. Prescription Diet® c/d® has reduced levels of magnesium and phosphorus, and also produces an acid urine pH to aid in the management of struvite crystals and stones. The nutritional formulation of Prescription Diet® c/d® may also be useful for pets with a variety of conditions.

b/d® Canine

For the Nutritional Management of Dogs with Behavioural Changes Associated with Brain Aging

Prescription Diet® b/d® Canine dog food is formulated to help fight age-related behaviour changes in older dogs. An older dog's brain is

more vulnerable to free radicals that are naturally produced by the body. The damage free radicals inflict on the brain is often the cause of age-related behavioural changes in older dogs. Prescription Diet® b/d® Canine is specifically formulated with an exclusive blend of antioxidants and other nutrients to help fight the signs of brain aging and age-related behavioural changes and even help improve the learning ability of older dogs. The nutritional formulation of Prescription Diet® b/d® may also be useful for pets with a variety of conditions.

Canine Treats

Even dogs on Prescription Diet brand therapeutic foods need an occasional treat, but how can you ensure you're not harming your dog? The answer is low calorie, low mineral treats for dogs on Prescription Diet® b/d® Canine, c/d® Canine, g/d®

Canine, h/d® Canine, j/d™ Canine, k/d® Canine, r/d® Canine or w/d® Canine. Up to 10% of the daily energy needs can be met by feeding these treats while still maintaining an appropriate nutrient profile to aid in the management of the underlying disease.

c/d® Canine

For the Nutritional Management of Dogs with Urinary Tract Disease Associated with Struvite

Urinary tract disease is associated with the build-up of crystals and stones in the urinary tract that can cause

painful and bloody urination and potential blockage in your dog. One type of crystal that forms in a dog's urinary tract is called struvite. Prescription Diet® c/d® dog food is formulated specifically to provide nutritional management of dogs with struvite-related urinary tract disease. Prescription Diet® c/d® has reduced levels of magnesium and phosphorus, and also produces an acid urine pH to aid in the management of struvite crystals and stones. The nutritional formulation of Prescription Diet® c/d® may also be useful for pets with a variety of conditions.

d/d® Duck Formula Canine

For the Nutritional Management of Dogs with a range of inflammatory skin conditions and Food Allergy and Intolerance

The nutritional formulation of Prescription Diet® d/d® dog food includes enhanced levels of Omega-3 fatty acids and antioxidants, which have been shown to be useful for pets with a variety of inflammatory skin conditions that are often associated with excessive itching, scratching and licking.

Food allergy and intolerance may result in numerous skin and stomach problems that can cause discomfort and pain in your dog. This condition, also known as an adverse reaction to food, is usually an abnormal response to the protein found in many pet foods. Prescription Diet® d/d® comes with novel protein sources (new to your dog) to help manage adverse reactions to food. Commonly, reactions occur as a result of beef, dairy products and wheat. Prescription Diet® d/d® foods contain none of these allergens.

d/d® Potato & Duck Formula Canine
For the Nutritional Management of Dogs with a range of inflammatory skin conditions and Food Allergy and Intolerance

The nutritional formulation of **Prescription Diet® d/d®** dog food includes enhanced levels of Omega-3 fatty acids and

antioxidants, which have been shown to be useful for pets with a variety of inflammatory skin conditions that are often associated with excessive itching, scratching and licking.

Hypoallergenic Treats

A tasty treat specially formulated to eliminate the potential for an allergic reaction in pets with suspected food allergies or for pets with inflammatory skin conditions.

g/d® Canine
For the Nutritional Management of Older Dogs

Older dogs are at risk of many diseases and require food designed to help reduce nutrient excesses that may be harmful to their system. For example, by reducing sodium,

dogs with mild heart disease are less likely to exhibit signs associated with sodium and fluid retention. Increasing Omega-3 fatty acids and low sodium may help improve blood flow to the kidneys while helping to minimize high blood pressure. The nutritional formulation of **Prescription Diet® g/d®** dog food may also be useful for pets with a variety of conditions.

i/d® Canine
For the Nutritional Management of Dogs with Gastrointestinal Disorders

Gastrointestinal (GI) disorders affect the stomach and intestines, causing painful symptoms and problems with your dog's overall health.

Some of the more common symptoms include vomiting, regurgitation, flatulence, weakness, diarrhoea or constipation. **Prescription Diet® i/d® Canine** dog food is a highly digestible formula created specifically to help manage dogs with GI disorders. There are several types of GI disorders that affect dogs, including colitis, constipation/diarrhoea, gastroenteritis and pancreatitis. The nutritional formulation of **Prescription Diet® i/d®** may also be useful for pets with a variety of conditions.

j/d® Canine
Hill's® Prescription Diet®
j/d™ Canine is an innovative dog food that helps maintain healthy joints and improves mobility in dogs. Its unique formula contains high levels of EPA (Eicosapentanoic Acid), an omega-3 fatty acid found in high concentrations in fish oil.

Research has shown that EPA can help maintain joint function. Enhanced levels of glucosamine and chondroitin provide the building blocks of healthy cartilage, and L-carnitine, which helps maintain optimum body weight. **j/d™ Canine** improves the quality of life by helping dogs run better, play better, and rise more easily.

k/d® Canine
For the Nutritional Management of Dogs with Kidney Disease

There are many causes for kidney disease (also called renal disease) resulting in a variety of uncomfortable and life threatening symptoms for

your dog. Kidney disease can be either sudden (acute) or occur gradually (chronic).

Prescription Diet® k/d® Canine dog food is specially formulated by veterinarians to help manage dogs with kidney disease. Kidney disease may develop because of other diseases or changes in health, breed/hereditary tendencies and even nutritional factors. Signs of kidney disease don't usually appear until more than two-thirds of kidney function is lost.

Prescription Diet® k/d® Canine is clinically proven to extend and improve quality of life in dogs with kidney disease. The nutritional formulation of **Prescription Diet® k/d®** may also be useful for pets with a variety of conditions.

p/d® Canine
For the Nutritional Management of Puppies.

During their first year, growing puppies have special nutritional needs. Prescription Diet® Canine p/d® brand pet food meets these needs. Balanced levels of calcium, phosphorus and other nutrients permit a smooth transition at weaning

and provide high-quality nutrition to maturity. Prescription Diet® Canine p/d® also contains high levels of protein, energy and minerals to aid in recovery of puppies or adult dogs. Canine p/d® can be used as a recuperative formula for acute or chronic debilitating diseases such as trauma, sepsis, anaemia, parasitism and surgery. For dogs requiring assisted feeding, refer to Canine/Feline a/d®. The nutritional formulation of Prescription Diet® p/d® may also be useful for pets with a variety of conditions.

For dogs requiring assisted feeding, refer to **Canine/Feline a/d®**.

p/d® Canine Large Breed

For the Nutritional Management of Puppies at Risk of Developmental Growth Disorders.

Developmental growth disorders profoundly affect growth patterns and cause painful skeletal abnormalities in your puppy. All puppies are susceptible but large and giant breeds (those who will weigh more than 55 lb. when fully grown) are at greatest risk. Prescription Diet® p/d® Large Breed Canine dog food has been designed by veterinarians to nutritionally manage puppies with high likelihood of developmental growth disorders, with a large breed formula that meets the special needs of large and giant breed pups. It is enhanced with natural DHA, an Omega-3 fatty acid vital in the development of the brain and nervous system in puppies. The nutritional formulation of Prescription Diet® p/d® Large Breed may also be useful for pets with a variety of conditions.

r/d® Canine For the Nutritional Management of Obese or Overweight Dogs

Being overweight can cause your pet discomfort, reduce energy levels and even shorten their life. Just as in people, weight gain is usually

associated with excessive calorie and fat intake combined with a lack of exercise. Obesity can lead to such serious conditions as heart disease, arthritis, and diabetes. **Prescription Diet® r/d® Canine** dog food was designed specifically for the management of dogs that are overweight or obese. Its low fat, reduced calorie, high fiber formula helps dogs lose weight while helping them feel full. **Prescription Diet® r/d® Canine** has the highest levels of L-carnitine of any therapeutic weight loss food to help burn fat while increasing lean muscle mass. The nutritional formulation of **Prescription Diet® r/d®** may also be useful for pets with a variety of conditions.

r/d® Canine For the Nutritional Management of Obese or Overweight Dogs

Being overweight can cause your pet discomfort, reduce energy levels and even shorten their life. Just as in people, weight gain is usually

associated with excessive calorie and fat intake combined with a lack of exercise. Obesity can lead to such serious conditions as heart disease, arthritis, and diabetes. **Prescription Diet® r/d® Canine** dry dog food is designed specifically for the management of dogs that are overweight or obese. Its low fat, reduced calorie, high fiber, high lysine formula helps dogs lose weight while helping them feel full. **Prescription Diet® r/d® Canine** dry has the highest levels of L-carnitine and lysine of

any competitive therapeutic weight loss food to help burn fat while increasing lean muscle mass. **r/d® Canine** dry provides an optimal blend of soluble and insoluble fiber to trigger GI tract satiety signals and to fill the upper GI tract to give dogs a feeling of fullness. The nutritional formulation of **Prescription Diet® r/d® Canine** may also be useful for pets with a variety of conditions as recommended by your Veterinarian.

r/d® with Chicken Canine For the Nutritional Management of Obese or Overweight Dogs

Being overweight can cause your pet discomfort, reduce energy levels and even shorten their life. Just as in

people, weight gain is usually associated with excessive calorie and fat intake combined with a lack of exercise. Obesity can lead to such serious conditions as heart disease, arthritis, and diabetes. **Prescription Diet® r/d® Canine** dry dog food is designed specifically for the management of dogs that are overweight or obese. The nutritional formulation of **Prescription Diet® r/d® Canine** may also be useful for pets with a variety of conditions as recommended by your Veterinarian.

s/d® Canine For the Nutritional Management of Dogs with Urinary Tract Disease

Urinary tract disease in dogs is often caused by the formation of mineral-based crystals and stones in the urinary tract that can cause

discomfort, bloody urine and even life-threatening obstruction. For dogs, struvite crystals generally cause urinary tract disease. **Prescription Diet® s/d®** dog food is formulated by veterinarians to help dissolve struvite crystals and stones in your dog. **Prescription Diet® s/d®** has highly reduced levels of magnesium, phosphorus and protein, and also produces an acid urine pH, to aid in the management of struvite crystals and stones. The nutritional formulation of **Prescription Diet® s/d®** may also be useful for pets with a variety of conditions.

t/d® Canine
For the Nutritional
Management of Dogs with
Dental Disease

This painful and potentially serious problem is most usually a result of plaque and tartar buildup at and under the gum line. **Prescription Diet® t/d® Canine**

dog food is formulated specifically for the nutritional management of dogs with dental disease. It's special fiber matrix scrubs the exposed tooth surface like an edible toothbrush, reducing bacteria-laden plaque. If left unchecked, this buildup can lead to gingivitis, a dental condition that can weaken the gums and tissues that support the teeth. The nutritional formulation of **Prescription Diet® t/d®** may also be useful for pets with a variety of conditions.

u/d® Canine
For the Nutritional
Management of Dogs with
Urolithiasis

Urolithiasis is marked by a variety of symptoms for your dog that often include straining to urinate, frequent urination, blood in the urine and a

painful abdomen. This condition, which consists of mineral stones forming in the urinary tract, is often initially treated with surgery and then followed with proper nutrition to help prevent recurrence of the stones. **Prescription Diet® u/d® Canine** dog food was developed to aid in the management of dogs with the problems associated with urolithiasis, specifically calcium oxalate, urate and cystine urolithiasis. **Prescription Diet® u/d® Canine** can also be used in dogs with advanced stages of kidney disease because of its low mineral levels and formulation. The nutritional formulation of **Prescription Diet® u/d®** may also be useful for pets with a variety of conditions.

t/d® Small Bites
Canine
For the Nutritional
Management of Dogs with
Dental Disease.

This painful and potentially serious problem is most usually a result of plaque and tartar buildup at and under the

gum line. **Prescription Diet® t/d® Canine Small Bites** dog food is formulated specifically for the nutritional management of dogs up to 15 pounds with dental disease who prefer a smaller kibble size. It's special fiber matrix scrubs the exposed tooth surface like an edible tooth brush, reducing bacteria-laden plaque. If left unchecked, this buildup can lead to gingivitis, a dental condition that can weaken the gums and tissues that support the teeth. The nutritional formulation of **Prescription Diet® t/d®** may also be useful for pets with a variety of conditions.

w/d® Canine
For Weight Control and the
Nutritional Management of
Fiber Responsive Diseases

Excess weight, diabetes and digestive troubles can cause problems for your dog. Feeding the right food can help your pet live a healthier

lifestyle. **Prescription Diet® w/d® Canine** dog food, with its fiber rich formula, may be useful as a nutritional aid for dogs with fiber responsive diseases such as diabetes mellitus, colitis, diarrhea, constipation, and to help manage overweight dogs, including those with struvite urolithiasis. The nutritional formulation of **Prescription Diet® w/d®** may also be useful for pets with a variety of conditions.

For Weight Control and the Nutritional Management of Fiber Responsive Diseases

Excess weight, diabetes and digestive troubles can cause problems for your dog. Feeding the right food can

help your pet live a healthier lifestyle. **Prescription Diet® w/d® Canine** dog food, with its fiber rich formula, may be useful as a nutritional aid for dogs with fiber responsive diseases such as diabetes mellitus, colitis, diarrhea, constipation, and to help manage overweight dogs, including those with struvite urolithiasis. The nutritional formulation of **Prescription Diet® w/d®** may also be useful for pets with a variety of conditions.

z/d® Low Allergen Canine
For the Nutritional Management of Dogs with Food Allergies and Food Intolerance

Some dogs can have problems that result in sensitive or irritated skin, coat

and ear conditions or even digestive problems. These problems are often a result of food allergies or intolerance, which are also called adverse reactions to food. This typically is caused by an abnormal response to the protein in the food. Only Prescription Diet® z/d® Canine dog food is formulated with Hill's Hydrolyzed Protein System™, a process that breaks down intact animal proteins and significantly reduces the possibility of an adverse reaction to food. z/d® Low Allergen Canine avoids common food allergens to further help reduce the potential for a negative response. The nutritional formulation of Prescription Diet® z/d® Low Allergen may be useful for pets with a variety of conditions, ask your veterinarian if z/d Prescription Diet® z/d® Canine dog food is right for your pet.

z/d® ULTRA Allergen-Free Canine
For the Nutritional Management of Dogs with Food Allergy and Intolerance

Food allergy and intolerance are potentially serious problems that can result in

sensitive or irritated skin, coat and ear conditions or even digestive problems. Dogs that have food allergy or intolerance, also called adverse reactions to food, typically are having an abnormal response to the protein in the food. Only **Prescription Diet® z/d® ULTRA Allergen Free Canine** canned dog food is formulated with **Hill's Hydrolyzed Protein System™**, a process that breaks down intact animal proteins

and significantly reduces the possibility of an adverse reaction to food. Reactions usually occur as a result of beef, dairy products and wheat. **z/d® ULTRA Allergen Free Canine** canned contains none of these allergens. The nutritional formulation of **Prescription Diet® z/d® ULTRA Allergen Free** canned may also be useful for pets with a variety of conditions.

z/d® ULTRA Allergen-Free Canine
For the Nutritional Management of Dogs with Food Allergy and Intolerance

Food allergy and intolerance can be mild to severe and may include painful problems with

the skin, ears and digestive tract. These responses, also known as adverse reactions to food, are usually a response to protein in the food. **Prescription Diet® z/d® ULTRA Allergen-Free Canine** dog food is designed by veterinarians for the diagnosis and nutritional management of food allergy and food intolerance in dogs. Only **Prescription Diet® z/d®** is formulated with **Hill's Hydrolyzed Protein System™**, a process that breaks down intact animal proteins and virtually eliminates the possibility of an adverse reaction to food. Most reactions occur because of an allergy to beef, dairy products or wheat. **z/d® ULTRA Allergen-Free Canine** contains none of these allergens. This product is considered the "Gold Standard" by veterinarians at Hill's to provide the ultimate food in eliminating the chance of adverse food reactions or allergies in dogs. The price is worth the confidence you will have in providing your pet relief. The nutritional formulation of **Prescription Diet® z/d® Ultra Allergen-Free** may also be useful for pets with a variety of conditions.
